

INNOVATIONS FOR LIVING®

EnergyComplete™ System

Enhanced for maximum performance in weather down to 20°F.

NEW
All-Weather
Formula

We have worked with you since the launch of the EnergyComplete™ System to develop enhancements to our unique flexible foam sealant. The result of this collaboration is the new EnergyComplete™ All-Weather System—delivering the flexibility and performance you are looking for, no matter the time of year.

Added flexibility

Unlike other foam products that have two separate formulas—one for summer and one for winter—you can use the EnergyComplete™ All-Weather System throughout the year. Now you can work in cold weather (to 20°F) without heating the building to 40°F for optimum results, virtually eliminating cold-weather installation costs. So not only is the number of jobs you can take increased, but inventory management is also simplified by only having to buy and stock one product.

New fire rating

On top of working all year round, our reformulated flexible foam sealant is now rated for fire blocking. Recognized as an alternative to the methods prescribed by code for maintaining the integrity of penetrations, it enables you to address more air sealing needs with a single product.

Greater consistency

The reformulated flexible foam sealant has better consistency and holding power, yielding less blowback while spraying and making it easy to reapply over missed areas.

Performance

The system does not support mold growth in accordance with ASTM G21 standards. In addition to providing mold resistance, the system saves you work and time. No longer needing to be drill mixed, side B of the equipment now requires less prep on your part.

Because you—and your customers—demand the best products and performance available, we will continue to work to ensure you can deliver just that. On that note, please make sure you've received and installed these additional system accessories:

- Static mixer
- Housing upgrade kit
- Machine, hose, material and gun insulation kit

For more information on the new EnergyComplete™ All-Weather System, contact your local ASM or visit ocenergycomplete.com.
